COMCAST BUSINESS
Powering Possibilities™

Comcast Business

Cybersecurity Portfolio

Understanding our security offerings and how they benefit general businesses.

Mobile Devices

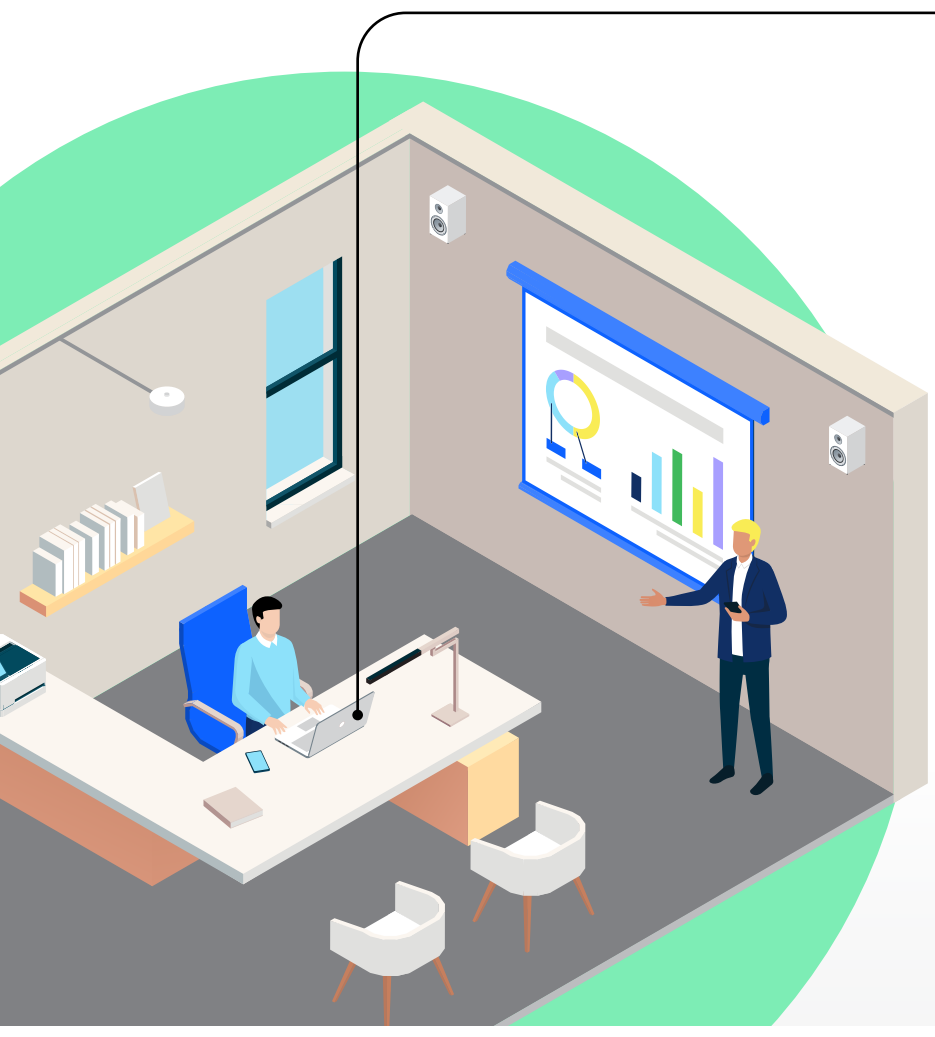

Providing security and reliable connectivity to mobile devices for in-person, remote and hybrid workforces.

SecurityEdge™ with Extended Coverage*

Helps protect endpoint devices that employees and guests use every day from malware, ransomware, phishing, and botnets.

**Currently in Market Trial.*

Laptops and Desktops

Providing security and protection for inbound and outbound traffic to help secure sensitive information.

Endpoint Detection & Response (EDR)

Helps protect devices against growing ransomware, malware, and phishing attacks using endpoint security. Provides tools, analytics, and security operations support in a single solution.

Advanced Security

Our advanced security solutions – **Unified Security** (on-premise) and **Unified Secure Access** (in the cloud with the option to add on Secure Remote Access for mobile workforce) – provide security and protection for inbound and outbound traffic to help secure sensitive information.

Network Closet

Monitoring volume of application and network traffic, and analyzing inbound traffic.

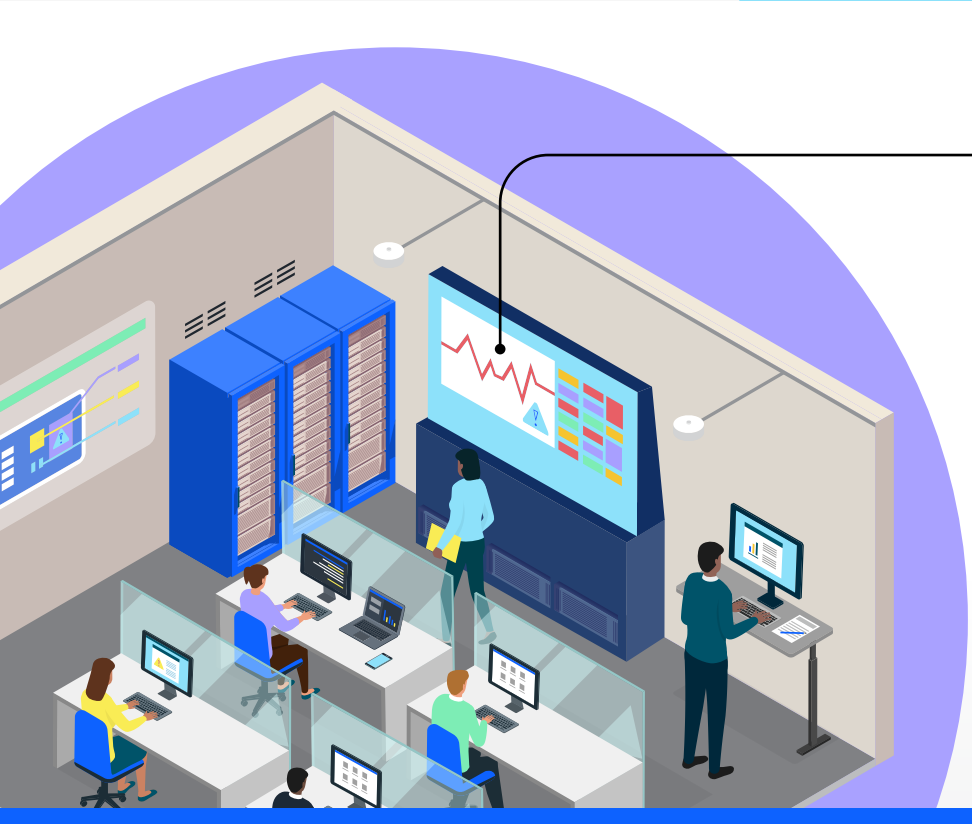

Next Generation Firewall

Keeps track of the state of active network connections while analyzing incoming traffic to help secure sensitive information. Includes features such as application awareness, integrated intrusion prevention and threat intelligence.

DDoS Mitigation

Helps protect against distributed denial of service (DDoS) attacks. Real-time detection and mitigation for business cybersecurity helps stop threats and routes clean traffic to its endpoint, helping maintain network availability.

IT Environment

End-to-end security monitoring across an organization's entire network infrastructure, including endpoints, network, and applications.

Managed Detection & Response (MDR)

Helps prevent potential disruptions and data breaches across the entire IT environment by identifying and responding to threats before they impact customer operations. Utilizes cloud SIEM, endpoint visibility and 24/7 SOC.

See how these solutions fit into the full **Comcast Business portfolio** of cybersecurity offerings.
